Patent No. US2002012968A1

GENERAL INFORMATION:

APPLICANT: Bristol-Myers Suibb Company
TITLE OF INVENTION: No. US20020012968A1e1 Drosophila Tumor Necrosis Factor Class Molec
TITLE OF INVENTION: Variants Thereof
TITLE OF INVENTION: Variants Thereof
FILE REFERENCE: D0016.np
CURRENT FILING DATE: 2001-03-20
PRIOR APPLICATION NUMBER: 60/190,816
PRIOR APPLICATION NUMBER: 60/190,816
PRIOR FILING DATE: 2000-03-21
NUMBER OF SEQ ID NOS: 65
SOFTWARE: Patentin Version 3.0

IPH1 protein - yeast (Saccharomyces cerevisiae)
NyAlternate names: protein L8083.9; protein YER233c; RRP3 protein
C;Species: Saccharomyces cerevisiae
C;Species: Saccharomyces cerevision
C;Accession: S55352; S5146; S47477
R;Cherel, I; Thuriaux, P.

-!- FUNCTION; May play a role in the regulation of calcium sequestration or release in the SR of skeletal and cardiac muscle.
-!- SUBCELLULAR LOCATION: Sarroplasmic reticulum lumen.
-!- SIMILARITY: STRONG, TO RABBIT HRC.
                                                                                                                                     Gaps

-!- PTM: Processing by furin produces a secreted form (By similarity).
-!- DTM: Processing by furin produces a secreted form (By similarity).
-!- DISEASE: Defects in ED1 are the cause of anhidrotic ectodermal dysplasia. The disease is characterized by sparse hair (atrichosis or hypotrichosis), abnormal or missing teeth and the inability to sweat due to the absence of sweat glands.
-!- SIMILARITY: Belongs to the tumor necrosis factor family.
-!- SIMILARITY: Contains 1 collagenous domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                EMBL; AJ300468; CAC29151.1; -.

"Mutations within a furin consensus sequence block proteolytic release of ectodysplasin-A and cause X-linked hypohidrotic ectodermal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Hum. Mutat. 17:349-349(2001).
-1- FUNCTION: Seems to be involved in epithelial-mesenchymal signaling during morphogenesis of ectodermal organs. Isoform Al binds only to the receptor EDAR, while isoform A2 binds exclusively to the receptor XEDAR.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         "Scarcity of mutations detected in families with X linked hypohidrotic

PTM: N-glycosylated.

PTM: Processing by furin produces a secreted form.

DISBASE: Defects in EDI are the cause of ectodermal dysplasia, anhidrotic (EDA) [MIM: 305100], also known as X-linked hypohidrotic ectodermal dysplasia (XLHED). EDA is a disease characterized by sparse hair (atrichosis or hypotrichosis), abnormal or missing teeth and the inability to sweat due to the absence of sweat glands. EDA is the most common form of over 150 clinically distinct ectodermal dysplasias. This disease was already described
                                                                                                                                                                                                                                                                                                                                Isold=Q92838-8; Sequence=VSP 006460, VSP 006461;
TISSUE SPECIFICITY: Not abundant; expressed in specific cell types
of ectodermal (but not mesodermal) origin of keratinocytes, hair
                                                                                                                                                                                                                                                                                                                                                                                                             follicles sweat glands. Also in adult heart, liver, muscle, pancreas, prostate, fetal liver, uterus, small intestine and umbilical chord.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           SÍMILARITY: Belongs to the tumor necrosis factor family. SIMILARITY: Contains 1 collagenous domain.
                                                                                                                                                                      IsoId=092838-5; Sequence=VSP_006458, VSP_006461;

                                                                                                               "Ectodysplasin, a protein required for epithelial morphogenesis, is a novel TNF homologue and promotes cell-matrix adhesion."; Mech. Dev. 88:133-146 (1999).

-!- FUNCTION: Involved in epithelial-mesenchymal signaling during morphogenesis of ectodermal organs. Isoform TRA binds only to the receptor EDAR, while isoform TA-A2 binds exclusively to the receptor XEDAR.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     -!- PTM: N-glycosylated (By similarity).
-!- PTM: Processing by furin produces a secreted form (By similarity).
-!- PTM: Processing by furin produces a secreted form (By similarity).
-!- DISEASE: Defects in ED1 are the cause of the tabby phenotype in mice (the equivalent of anhidrotic ectodermal dysplasia in humans). The disease is characterized by sparse hair (atrichosis or hypotrichosis), abnormal or missing teeth and the inability to sweat due to the absence of sweat glands.
-!- SIMILARITY: Belongs to the tumor necrosis factor family.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               decondensation by binding to histone H. ";

Eur. J. Biochem. 175:525-530 (1988).

-!-FUNCTION: Nucleolin is the major nucleolar protein of growing eukaryotic cells. It is found associated with intranucleolar chromatin and preribosomal particles. It induces chromatin decondensation by binding to histone H1. It is thought to play role in pre-rRNA transcription and ribosome assembly.

-!-SUBCELLULAR LOCATION: Nuclear; nucleolar.

-!-SIMILARITY: Contains 4 RNA recognition motif (RRM) domains.
